

EQACC SOLAR

Solomon Islands 5G base station distribution box suppliers

Overview

What is a 5G base station?

It consists of antennas, transceivers, and digital processing units that transmit and receive radio signals between user devices and the network. 5G base stations operate on various frequency bands, including sub-6 GHz and mmWave, to deliver ultra-low latency, high data throughput, and enhanced capacity.

What is a 5G NR Network?

As defined in 3GPP TS 38.300, the 5G NR network consists of NG RAN (Next Generation Radio Access Network) and 5GC (5G Core Network). As shown, NG-RAN is composed of gNBs (i.e., 5G Base stations) and ng-eNBs (i.e., LTE base stations). The figure above depicts the overall architecture of a 5G NR system and its components.

What is a 5G modem?

5G modems are integrated into smartphones, laptops, routers, and other connected devices, ensuring seamless access to 5G services. Advanced 5G modems also support standalone (SA) and non-standalone (NSA) network architectures, enabling a smooth transition and backward compatibility with 4G LTE networks.

What is Ericsson 5G radio dot?

- The product called Ericsson 5G Radio Dot offers fast and flexible 5G indoor coverage. It operates on 5G midbands (i.e. 3-6 GHz) and delivers speeds up to 2 Gbps.
- Using Ericsson Spectrum Sharing Software Solution, it is possible to share spectrum between 4G and 5G dynamically at the same time and using existing same hardware.
