

**EQACC SOLAR**

# **South Sudan Transparent Series solar Glass Cells**

## Overview

---

What are the characteristics of a BIPV-plant with transparent glass-glass modules?

The overall appearance of a BIPV-plant with transparent glass-glass modules is characterized by its level of transparency. Characteristic for transparent solar modules with crystalline solar cells are the visibility of the individual solar cells and their shadowing.

What are wavelength-selective transparent solar cells (TSCs)?

Wavelength-selective transparent solar cells (TSCs), which are complementary technologies to traditional solar panels, enable the generation of solar power on agricultural land and in building structures without negative impacts on yield or aesthetics.

What is a transparent luminescent solar concentrator?

Transparent luminescent solar concentrator (TLSC) Michigan State University has reported another approach in 2014 called TLSC, which is based on organic salts, and these take a totally different direction to realise a solar cell design with a different structure, which combines efficiency with transparency.

What is a transparent solar cell?

Transparency is a physical property that allows light to pass through without interrupting it. The core of this research is transparent solar cell (TSC) and its use in many applications that require optically transparent solar cells, such as car windows. What makes a material transparent is the arrangement of atoms and electrons in it.

## South Sudan Transparent Series solar Glass Cells

---

### 25-cm<sup>2</sup> glass-like transparent crystalline silicon solar cells ...

The surface-treated 25-cm<sup>2</sup> solar cells have higher efficiency than the surface-treated 1-cm<sup>2</sup> solar cells because of the greater edge electrode area. In addition to the main ...
