

EQACC SOLAR

Southern Europe Air Energy Storage Project

Overview

What is compressed air energy storage (CAES)?

Compressed Air Energy Storage (CAES) offers potential, but faces challenges including poor efficiency and reliance on fossil fuels. In this context, the EU-funded Air4NRG project aims to improve long-term energy storage. Specifically, it targets over 70 % round-trip efficiency, sustainability, and integration with the grid.

How will air4nrg revolutionise energy storage?

Air4NRG aims to revolutionise energy storage by leveraging isothermal compression-expansion technology. The project will provide robust, safe, and scalable energy storage solutions, using local materials to promote European industrial leadership and reduce dependency on imported resources.

Is compressed air energy storage a viable solution?

Compressed Air Energy Storage (CAES) has been a valid possible solution for decades. However, its poor energy efficiency, the need for fossil fuels to regenerate electricity, and the use of underground cavities as storage reservoirs have limited its development and use.

What is isothermal compressed air energy storage (isothermal-CAES)?

Air4NRG will develop an Isothermal Compressed Air Energy Storage (Isothermal-CAES) system relying, among other things, on isothermal compression and expansion of air by liquid piston to solve the problems of the former CAES.

Southern Europe Air Energy Storage Project

Air4NRG , Air isothermal compression technology for long term energy

Air4NRG's main objective is the development of an innovative, efficient (over 70% round-trip efficiency), long-term, sustainable Compressed Air Energy Storage (CAES) prototype, which ...
