

EQACC SOLAR

Specialized battery for mobile base station equipment

Overview

Which battery is best for telecom base station backup power?

Among various battery technologies, Lithium Iron Phosphate (LiFePO4) batteries stand out as the ideal choice for telecom base station backup power due to their high safety, long lifespan, and excellent thermal stability.

What makes a telecom battery pack compatible with a base station?

Compatibility and Installation Voltage Compatibility: 48V is the standard voltage for telecom base stations, so the battery pack's output voltage must align with base station equipment requirements. **Modular Design:** A modular structure simplifies installation, maintenance, and scalability.

What is a battery management system (BMS)?

Battery Management System (BMS) The Battery Management System (BMS) is the core component of a LiFePO4 battery pack, responsible for monitoring and protecting the battery's operational status. A well-designed BMS should include:

- Voltage Monitoring:** Real-time monitoring of each cell's voltage to prevent overcharging or over-discharging.

What makes a good battery management system?

A well-designed BMS should include:

- Voltage Monitoring:** Real-time monitoring of each cell's voltage to prevent overcharging or over-discharging.
- Temperature Management:** Built-in temperature sensors to monitor the battery pack's temperature, preventing overheating or operation in extreme cold.

Specialized battery for mobile base station equipment

Telecom Base Station Backup Power Solution: ...

Discover the 48V 100Ah LiFePO4 battery pack for telecom base stations: safe, long-lasting, and eco-friendly. Optimize reliability with ...
