# Subsidy for replacement of new energy battery cabinets

## Overview

---

Should government subsidies be used battery recycling & R&D?

When the government adopts a fi subsidy strategy, both for power battery R&D and used battery recycling, the effect is better than that of no subsidy. It means that government subsidies can effectively incentivize battery manufacturers and NEV manufacturers to increase investment in battery R&D and waste battery recycling.

What is the subsidy strategy of power battery manufacturers?

Subsidy strategy of power battery manufacturers (b-Strategy): Currently, NEV users are concerned about range, safety performance, and charging times. This requires battery companies to innovate in battery design, production processes, and integrated systems to better align with consumer expectations.

Does government subsidize battery manufacturers?

Especially when the government subsidizes battery manufacturers alone, this approach not only directly promotes the progress and innovation of battery technology, but also indirectly creates synergies for NEV manufacturers and promotes the overall development of the industry.

What subsidies are available to replace fossil fuel-powered vehicles?

1. Vehicle trade-ins: Increased subsidies for replacing used fossil fuel-powered vehicles with new energy or fuel-efficient vehicles. Subsidies of up to 20,000 yuan (\$2,810) are available for the purchase of new energy vehicles and 15,000 yuan for efficient fossil fuel-powered vehicles. 2.
