

EQACC SOLAR

Sudan Uninterruptible Power Supply Project

Overview

What is the energy supply in Sudan?

The energy supply in Sudan is primarily derived from crude oil, hydroelectricity, biomass, and renewable energy sources such as wind, solar, and geothermal energy. As illustrated in Figure 2a, biomass is the largest contributor, accounting for 52% of Sudan's total energy consumption.

How much of Sudan's electricity is derived from hydropower?

While 54.6% of the country's electricity is derived from hydropower, other renewable sources collectively contribute a mere 0.78% to the national grid. To address this disparity, collaborative efforts between public and private sectors are imperative to advance renewable energy development and utilization in Sudan.

Is nuclear energy a potential source of energy in Sudan?

This initiative was informed by an energy forecasting study conducted with the assistance of the IAEA under the Technical Cooperation Project SUD/0/008, which aimed to determine Sudan's optimal energy generation mix up to 2030, including nuclear energy as a potential source .

Does Sudan have a energy deficit?

Sudan is endowed with diverse energy resources, including both renewable and non-renewable sources. Despite this potential, the country faces a severe energy deficit, with existing governmental policies falling short of meeting the population's essential energy demands.
