

EQACC SOLAR

Tehran base station UPS power supply installation

Overview

How do I charge my ups?

Plug the UPS into a dedicated power outlet that matches the required voltage. Ensure that the UPS is not overloaded by checking the power capacity before connecting devices. Allow the UPS to fully charge before connecting critical equipment (typically 8–12 hours for a full charge).

How do I install a UPS battery?

For some UPS systems, batteries may be pre-installed, while others require manual installation. Follow the manufacturer's guidelines for inserting and connecting the batteries correctly. Ensure the battery connections are secure and the battery compartment is properly closed.

How do I set up ups?

Install any manufacturer-recommended software for UPS monitoring and configuration. Set shutdown preferences and power management options via the UPS software. If using remote management, configure the UPS network settings (SNMP, Modbus, or cloud-based monitoring). Turn on the UPS and check for any error indicators on the display.

Do I need a manual to install an ups?

Ensure all accessories, including power cables, user manuals, and rack-mounting kits (if applicable), are included. Refer to the manufacturer's manual for any special setup instructions. For some UPS systems, batteries may be pre-installed, while others require manual installation.

Tehran base station UPS power supply installation

GRADE A BATTERY

LiFePO4 battery will not burn when overcharged or over discharged, overcurrent or short circuit and can withstand high temperatures without decomposition.
