

EQACC SOLAR

Tehran coal-to-electricity energy storage device

Overview

What is Iran's energy policy?

of total final consumption of electricity of total final consumption of electricity Iran has in place legislation obliging the Minister of Energy to increase the share of renewables and clean power plants to at least 5% of the country's capacity until the end of 2021.

Can coal power plants be converted into energy storage and zero-carbon data centers?

This paper investigates a retrofitting strategy that turns coal power plants into thermal energy storage (TES) and zero-carbon data centers (DCs). The proposed capacity expansion model considers the co-locations of DCs, local renewable generation, and energy storage with the system-level coal retirement and retrofitting.

How can coal power plants be repurposed?

Retrofitting coal power plants provides a cost-saving solution by reusing the existing infrastructure and interconnections. They can be repurposed into thermal energy storage (TES), nuclear reactors, and data centers (DCs). These projects could significantly reduce carbon footprint and facilitate renewable energy integration.

Can coal power plants be retrofitted into molten-salt TES?

We consider retrofitting coal power plants into the molten-salt TES, widely used in concentrating solar thermal power stations. Its energy conversion processes involve three steps. First, TES is charged by the electrical heater using renewable energy (i.e., electricity-to-heat conversion).
