Tess-15-40 mobile energy storage power supply

Overview

What is a mobile energy storage system?

A mobile energy storage system is composed of a mobile vehicle, battery system and power conversion system . Relying on its spatial-temporal flexibility, it can be moved to different charging stations to exchange energy with the power system.

How does Tess optimize energy usage?

TESS optimizes energy usage by capturing, storing, and redeploying excess thermal energy generated by various processes, reducing overall power consumption by 20-40%. In the Hybrid Energy Recovery Configuration, the stored energy can be utilized to load level, peak shave, and in some cases provide a short term uninterrupted power supply function.

What is thermal energy storage system (TSS)?

TESS stands for Thermal Energy Storage System, and the core of our energy solutions. TESS captures unused thermal energy or heat and transforms it into usable energy. How Does It Work?

.

What is a mobile energy storage system (mess)?

During emergencies via a shift in the produced energy, mobile energy storage systems (MESSs) can store excess energy on an island, and then use it in another location without sufficient energy supply and at another time , which provides high flexibility for distribution system operators to make disaster recovery decisions .

Tess-15-40 mobile energy storage power supply

LiFePO₄ Battery,safety

Wide temperature: -20~55°C

Modular design, easy to expand

The heating function is optional

Intelligent BMS

Cycle Life:> 6000

Warranty:10 years
