# **The difference between power station and solar container outdoor power**

## Overview

---

What is the difference between a portable power station and a solar generator?

The primary distinction lies in how they handle energy. Portable power stations (PPS) store energy, while solar generators generate energy by converting sunlight through solar panels. However, if you pair a portable power station with solar panels, you essentially create a solar generator setup.

Are solar panels better than a portable power station?

Due to the necessary addition of solar panels, generators tend to be a little heavier and larger than PPS systems. However, portability varies significantly. A smaller model with solar panels will still be lighter than a more heavy-duty portable power station.

How does a solar generator work?

Solar generators function similarly to portable power stations, with one key distinction—they generate their own energy. While a portable power station (PPS) only stores electricity, a solar generator actively produces power using solar panels. Solar generators also use rechargeable batteries to store and provide energy when needed.

What is a solar powered generator?

EcoFlow solar generators are designed to be just as portable as traditional power stations. For example, the EcoFlow DELTA Mini + 110W solar panel combines the energy-storing unit with a lightweight, portable solar panel for on-the-go power generation. [How Does a Solar Powered Generator Work?](#)
