The first generation of uninterruptible power supply

Overview

What is the history of the uninterruptible power supply?

The uninterruptible power supply has an interesting history and has changed since its first introduction in 1934. Read on to learn more about the history of the uninterruptible power supply. Who Invented the Uninterruptible Power Supply?

John J. Hanley was the inventor of the uninterruptible power supply.

What is an uninterruptible power supply (UPS)?

An uninterruptible power supply (UPS) is a system that provides back-up power in the event of a power failure due to a natural disaster such as a typhoon or lightning strike, or an unexpected accident. Large-scale computers such as cloud systems have become important parts of our infrastructure that support our daily lives and businesses.

What is a portable ups?

A portable Uninterruptible Power Supply (UPS) is used in on-site applications across industries such as mining, military, and industrial sectors. It is designed to maintain a steady power supply even if the supply from the utility lines surges or fluctuates. This protects all devices connected to the UPS from unstable power supply.

What is a modern ups?

Modern Uninterruptible Power Supplies (UPSs) are quite different from the early devices. The modern UPS is not just a backup power source, but rather an advanced system capable of supporting modern servers and databanks. Contrary to the first UPSs that consisted of a flywheel providing short bursts of backup power, modern UPSs offer much more efficiency.
