

## EQACC SOLAR

**The inverter is smaller than the installed power**

## Overview

---

What if my inverter is bigger than my solar array?

An inverter that is the same size (in kW) or larger than your solar array is being under-utilised. An inverter that is paired with a solar array of up to 33% higher power will be operating at maximum power for longer each day. 2. Regulatory requirements But why a 6.6kW array of solar panels with a 5kW inverter?

What does oversizing a solar inverter mean?

Oversizing your solar system generally means that your solar inverter is oversized for the amount of solar panels and energy output you currently have. An example of this would be if you have 4kW of solar panels but a 5kW solar inverter. Why would I oversize my solar inverter?

Should I buy a larger solar inverter?

Maximise STCs: Purchasing a larger inverter might negate the savings you will receive on your STCs. A smaller inverter with maximised solar panels will attract a greater return when claiming the STCs. More efficient system: While a solar panel may be rated for 400W of solar production, the panels will not produce this 100% during daylight hours.

What does under-sizing a solar inverter mean?

Using the graph above as an example, under-sizing your inverter will mean that the maximum power output of your system (in kilowatts - kW) will be dictated by the size of your inverter. Solar inverter under-sizing (or solar panel array oversizing) has become common practice in Australia and is generally preferential to inverter over-sizing.

## The inverter is smaller than the installed power

---

### Why does my inverter generate less power than my solar ...

Why is my inverter giving less power than my solar panels can generate? This can have several causes. We look at the different possibilities below: Inverter is sized smaller ...

## Why is my inverter rated lower than the solar array?

Standard Test ConditionsInverter "Undersizing"Will Sizing The Inverter This Way Risk Damaging It?In

Summary Inverter manufacturers quote voltage and current ratings on their data sheets. A Solis 3.6-4G inverter, for example, has a maximum DC voltage of 600V and maximum current of 11A per input. Provided we don't exceed these maximums in operation we can connect any size of array to the inverter without the risk of damage. If we undersize the inverter too See more on [redelectrical.uk](http://redelectrical.uk)
