

## EQACC SOLAR

# The neutral line of the solar container communication station inverter is disconnected

## Overview

---

Which power line communication options are implemented in different solar installations?

Figure 1 shows typical power line communication options implemented in different solar installations. These installations can be divided into communication on DC lines (red) and communication on AC lines (blue).

What does a ground fault on a PV inverter mean?

The inverter's display indicates a ground fault. A ground fault condition has been detected in the PV array. The PV array should be checked and any faults to ground repaired. A well-maintained and properly functioning PV system is crucial for ensuring sustainable and efficient energy production.

What happens if the DC cable connects to the inverter?

3) The insulation layer of the DC cable connecting the string to the inverter is damaged and connected to the ground. Troubleshooting: Disconnect the DC switch of each PV string connected to the inverter, and use a multi-meter to measure the voltage of the PV+ to ground and PV- to ground of each string.

What does fault code 1033h mean on a solar inverter?

**Fault Description** In a solar photovoltaic system, if a ground fault occurs, the inverter will display a "GROUND-FAULT" alarm when it starts running, and the alarm code is 1033H. At the same time, it will disconnect from the grid until the fault is eliminated.
