

## **EQACC SOLAR**

**The second batch of solar container communication station inverters in Apia are connected to the grid**

## Overview

---

Are Chinese solar power inverters connected to critical infrastructure grids?

U.S. energy officials have launched an investigation after discovering unauthorized communication equipment embedded within Chinese-manufactured solar power inverters connected to critical infrastructure grids across the country.

Could remote inverters destabilize power grids?

Energy security experts warn that coordinated remote manipulation of these devices could destabilize power grids and trigger widespread blackouts, particularly as Chinese-made inverters now control a substantial portion of renewable energy capacity in the United States and Europe.

Do solar inverters contain undocumented cellular radio devices?

These inverters, which are essential components that convert direct current from solar panels into alternating current usable by the electrical grid, were found to contain undocumented cellular radio devices not disclosed in product specifications or technical documentation.

What is a multi-level topology for PV inverters?

Multi-level topologies allow the use of 900 V and 650 V SiC and GaN devices in 1500 V PV systems . In the literature, efficiencies of 99 % for PV inverters with SiC devices are reported, even if the higher cost is actually a limit for practical industrial use .
