What does an inverter do?

Inverters do more than just convert DC to AC. They provide essential functions that improve power quality, efficiency, and safety. Here's what an inverter does: 1. Power Conversion This is the primary function of an inverter – converting DC power from batteries or solar panels into AC power for homes, offices, and industries.

What is a DC inverter & how does it work?

Its task is to convert direct current (DC) into alternating current (AC) with adjustable frequency and voltage. Thanks to this, the inverter allows smooth control of the operation of electric drives, which translates into energy savings, longer machine life and precise control of industrial processes.

What is frequency inverter?

Frequency inverter is a dedicated accessory of inverter cabinet ,the variable frequency control the speed and the main technical parameters depends on the specification of built-in inverter and external configuration. Inverter cabinet have big difference according to the use of different application and different functions.
