# Travel outdoor power charging

## Overview

---

How to choose a portable charger for travel?

Choosing the right portable charger for travel depends on understanding its capacity and size. The capacity, measured in milliamp hours (mAh), ranges from 5,000mAh to 38,800mAh. For instance, a 10,000mAh power bank can charge an iPhone 8 about 3.6 times, while a 30,000mAh bank can do so for the iPhone 15 up to 5.5 times.

Do travel writers need a portable charger?

As a travel writer working on the go, having a fully charged phone and laptop is paramount. It's not unusual to be stuck at an airport with faulty or too few charging stations, or to have a seat on the plane where the charging outlet doesn't work. In these scenarios, a portable charger has come to the rescue more times than I can count.

Do portable power stations make camping better?

A good portable power station makes camping better. These devices power lights, phones, and small appliances when you're outdoors. We spent three months testing power stations to find the best portable power stations for camping. We tested 30 portable power stations over 12 camping trips.

How do I choose a good portable charger?

To choose a good portable charger, consider its output power. A 30W charger can charge faster than a 10W charger. Additionally, look for fast charging technologies like Power Delivery (PD) or Quick Charge (QC) for quicker charging. Many chargers also come with multiple output ports for charging multiple devices.
