Trimming of solar panels

**European
Warehouse**

 **7-15 days**
Delivery

ONE-STOP SOLUTION

65kWh 30kW

130kWh 30kW

130kWh 60kW

Overview

What is a solar module trimming machine?

A trimming machine is used to trim, or cut, the excess material from the cell edge of the solar module while maintaining uniformity. This is the next step after a solar module has been laminated. Trimming removes excess material like encapsulant and trims the backsheet to the required size before the frame of the module can be added.

How does a solar trim machine work?

They use a combination of computer-controlled cutting tools to trim the solar modules. The machines are programmed to cut the modules to a specified size and can produce hundreds of modules in a single day. The right trimming machine is essential for producing quality solar modules.

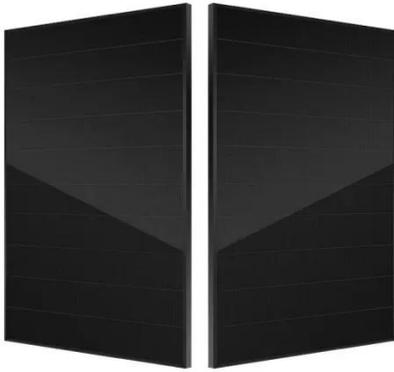

Do you need a solar trimming machine?

The right trimming machine is essential for producing quality solar modules. High-end trimming machines are capable of producing very high-quality cuts, while cheaper machines may produce uneven cuts that can result in poor module performance. There are several different types of trimming machines available.

How do I remove a solar panel?

To remove a solar panel for repair or replacement, you only need to remove the top strip of flooring trim. The panel can then be tipped out, lifted, and removed. The reverse procedure is followed to install a panel.

Trimming of solar panels

Edge Trimming Machine

Used for edge trimming of laminated PV modules to remove excess encapsulation film, glass burrs, or backsheet overflow, ensuring clean edges and precise dimensions. ...
