Turkmenistan Folding Container Three-Phase

Overview

What is a folding container?

Folding container varieties that can be manually installed are designed in detail as a system of interlocking components. The models which have folded size of 3.00 x 7.00 m length and 40 cm height or 2.40 x 6.00 m length and 40 cm height reach to 3.00 x 7.00 m length and 2.40 m height after installation.

How many containers can a collapsecon hold?

COLLAPSECON's innovative and fully automated design allows up to 4 containers to be collapsed and combined, giving them a fully laden weight and enabling them to be transported anywhere on a ship. 1/6 COLLAPSECON collapses horizontally, ensuring the container maintains its structural rigidity in any form.

How long does it take a container to collapse?

Many collapsible containers require 3-4 people and a crane to operate, often taking 15-20 minutes per unit to collapse, usually by lifting or pushing the container. This causes increased wear and tear, slows operations and increases safety risks. By comparison, COLLAPSECON has true stand-back functionality.
