U S solar panel retail prices

Overview

Solar prices stayed at their record-low median of \$2.48 per watt in the first half of 2025, unchanged from H2 2024. How much do solar panels cost?

As of 2025, the average cost of residential solar panels in the U.S. is between \$15,000 and \$25,000 before incentives. This typically translates to about \$2.50 to \$3.50 per watt of installed capacity (more on price per watt below). The total price depends on your system size, location, roof type, and installer.

Are solar panels expensive?

No, solar panels in the USA are not considered expensive. On average, a 6.6 kW solar panel system typically costs around \$16,000, not considering government incentives and rebates. Solar panel costs in the US usually range from \$4,500 to \$36,000, or \$1.00-\$3.60 per watt (W).

How much does a commercial solar system cost?

Costs vary by region, installer, and complexity. For commercial buildings, solar panels average \$2.00 per watt, with a 100 kW system potentially offsetting the entire electricity bill. The initial cost for commercial solar setups is around \$200,000 before incentives.

What is the relative cost of solar energy?

Another measure of the relative cost of solar energy is its price per kilowatt-hour (kWh). Whereas the price per watt considers the solar system's size, the price per kWh shows the price of the solar system per unit of energy it produces over a given period of time. Net cost of the system / lifetime output = cost per kilowatt hour
