UK wind solar and energy storage project planning

Overview

How will solar & storage change Britain's electricity system?

Solar and storage to play a key role alongside market reforms, changes to planning process, and a revamped connections queue. The UK government has unveiled its plan to decarbonize Great Britain's electricity system by 2030. Image: Wakerssk, pixabay.

What does the UK's energy policy mean for renewables?

The UK government's commitment to net-zero emissions by 2050 and a fully decarbonized power system by 2035 underpins a strong policy push for renewables. A dedicated Clean Power Plan 2030 calls for a rapid expansion of solar capacity to around 45 GW by 2030 .

How much wind does the UK need?

The UK currently has 15 gigawatts (GW) of offshore wind capacity, with another 16GW under construction or firmly committed. To meet the level required for clean power by 2030, the plan says that this would need to expand by at least another 12GW by 2030. Similarly, at least an additional 8GW of onshore wind and 22GW of solar would be needed.

Is the UK's solar and energy storage sector at an inflection point?

In conclusion, the UK's solar and energy storage sector finds itself at an inflection point – bolstered by supportive policy, buoyant investment, and rapid tech improvements, yet challenged by infrastructure bottlenecks and the practicalities of an unprecedented build-out.

UK wind solar and energy storage project planning

UK targets 45 GW solar, 23 GW BESS in Clean Power 2030 plan

The UK government has committed to around 30 GW more solar capacity in Great Britain's generation mix by 2030, as part of its Clean Power 2030 Action Plan unveiled on Dec. ...
