# UPS battery cabinet parallel connection

## Overview

---

Can a parallel redundant system use a separate battery cabinet?

There are two possible configurations for battery connection of the parallel redundant system. The two UPS modules may share the same battery cabinet(s), or each module may use a separate battery cabinet(s). Figure 7 shows a diagram of the parallel redundant system with UPS modules utilizing separate battery cabinets.

What is a parallel connection of ups?

In such cases, parallel connection of UPS units can be implemented to increase the overall capacity and redundancy of the power supply. The UPS parallel connection diagram depicts how multiple UPS units can be connected together to work in sync and provide a reliable power backup solution.

How do I install a parallel ups cabinet?

Use a forklift or pallet jack to move the packaged cabinet to the installation site, or as close as possible to the site, before unloading from the pallet. Prepare the site for the cabinet installation. Inspect, unpack, and unload the cabinet. Create an installation plan for wiring the parallel cabinet to the corresponding UPS modules.

How many UPS modules can be paralleled?

A parallel configuration is not limited to two UPS modules. It frequently includes up to four modules. With some Eaton three-phase UPSs, you can parallel as many as eight modules. a single system.
