

## EQACC SOLAR

# UPS uninterruptible power supply input voltage 240v

## Overview

---

What is a UPS (uninterruptible power supply)?

A UPS (uninterruptible power supply) sits between an alternative source of power – such as a standby diesel generator – and protected loads.

How much power does a 2U ups provide?

2.7kW 2U double-conversion UPS delivers 208/230V pure sine wave AC output, while protecting your mission-critical equipment during power outages.

What is a double conversion UPS?

Double-Conversion UPS Protects Equipment against Damage, Downtime and Data Loss This 200/208/220/230/240V 50/60 Hz UPS system maintains perfect output by converting AC input to DC, then reconverts UPS output to fully regulated sine wave AC with +/-2% voltage regulation in online and battery modes.

Does the ups support external battery packs?

For mission-critical applications demanding scalable extended runtime, the UPS supports “smart” external battery packs, such as BP72V18-2US (sold separately). Both the internal and external batteries are automatically sensed and configured during replacement to offer accurate runtime-remaining and battery age notifications during outages.
