

EQACC SOLAR

Uninterruptible power supply for lift pump

Overview

What is a lift UPS system?

With our range of lift UPS systems, we are able to mitigate a lift failing during a power disturbance. Designed to kick in to provide a power supply in the event of a power cut or a short circuit, uninterrupted power supplies are perfect for getting your lifts back on the move.

What happens if a lift UPS system fails?

When the power fails, our lift UPS will automatically switch to the battery mode. A three way output is then generated which helps to feed connected loads. When the main supply gets restored, our innovative elevator UPS systems transfers back to the lift's primary power source. The UPS system's batteries will then revert back to being charged.

What is a lift ups series?

Engineered for maximum reliability and performance, the Lift UPS Series provides essential backup power for: Passenger and goods lifts: Ensuring safe and continued operation during power failures. Evacuation lifts: Supporting emergency evacuation procedures in compliance with safety regulations.

Can a secondary power supply be used in an emergency lift?

In many cases, we have seen that providing a secondary power supply into the building simply isn't possible, so an onsite UPS power supply, backup generator or combination of both must be used instead. What are the Requirements for an Emergency Lift UPS?

Uninterruptible power supply for lift pump

Elevator Lift UPS Solutions , Elevator UPS , Lifts , Server ...

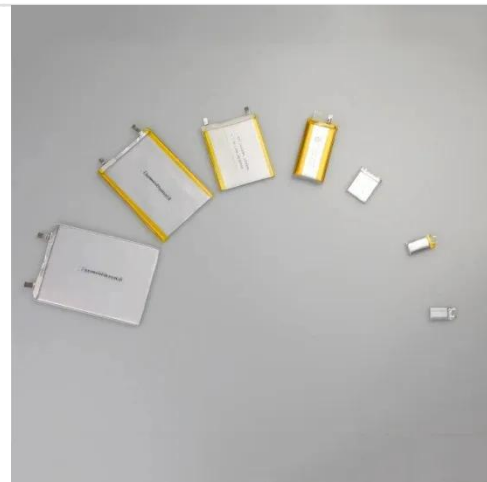

An Uninterruptible Power Supply and Standby Power Generator For lift and elevator UPS applications, we recommend installation of a Borri Emergency Central System (ECS) UPS ...
