# Uninterruptible power supply for operating room

## Overview

---

Medical UPS systems are indispensable in environments where power continuity is non-negotiable, such as operating rooms, intensive care units (ICUs), and life-support systems. What is an uninterruptible power supply system?

Supply Systems. Uninterruptible Power Supply (UPS) Systems are a critical part of a hospital's power supply infrastructure. When coupled with Isolated Power Supply (IPS) Systems and back-up generators, they provide the operating room and other critical care areas with continuity of power in the event of a supply failure.

What is a medical-grade uninterruptible power supply (UPS) system?

Our medical-grade uninterruptible power supply (UPS) system secures seamless backup power and protects your equipment from damage. These solutions will instantly switch your system to a backup power supply with no lapses, preventing dire consequences during medical procedures.

What should a medical UPS system do if power fails?

In the event of a power failure, medical UPS systems must seamlessly switch to backup power sources, such as generators or battery systems. The transition should occur without any disruption to the power supply, ensuring the safe operation of essential medical equipment. 3. Advanced Isolation and Monitoring.

Why do hospitals need a power ups system?

Operating rooms: Hospitals need constant power for surgical lights, anesthesia machines, and robots. Medical imaging: A UPS system can support CT scanners, MRI machines, and X-ray equipment. Much of this critical diagnostic equipment is sensitive to fluctuations in power.
