Uninterruptible power supply plugged in

Overview

What is an uninterruptible power supply (UPS)?

Uninterruptible power supplies (UPS) are critical for the operation of any secured system, and their use has increased exponentially in recent years.

Why do we need an uninterruptible power supply?

A consistent and reliable power supply is paramount in our technology-driven era. An uninterruptible power supply, or UPS, ensures that our equipment and systems stay powered even in the face of electrical hiccups.

How long can a ups last without power?

Discover how long a UPS can last without power—from 1 to 8 hours! Learn about UPS battery life, runtime, and factors affecting performance.

What is a power ups & how does it work?

A UPS is a device that provides power backup to electronic devices in the event of a power outage. It consists of a battery, a charger, and an inverter. When the UPS is plugged into a wall outlet, it charges its battery, which is then used to provide backup power to the connected devices when the power goes out.
