

**EQACC SOLAR**

# **Vietnam Energy Storage Machinery and Equipment Procurement**

## Overview

---

Why should Vietnam invest in solar power?

Vietnam can leverage domestic solar manufacturing to meet domestic demand, implement direct power purchase agreements (DPPAs) enabling private renewable supplies, accelerate grid and battery storage infrastructure, and avoid costly LNG imports by prioritizing renewables.

Should Vietnam recalibrate its power system?

As Vietnam grapples with rising power purchase costs and mounting utility losses, policymakers are under pressure to recalibrate the system to ensure long-term financial sustainability.

Can solar and wind power meet Vietnam's near-term energy needs?

Contrastingly, solar and wind power's lower capital requirements and faster development timelines are well-suited to meeting Vietnam's near-term energy needs. These projects can be implemented within months and with high certainty, unlike gas projects, which typically take four to five years to complete once financed.

Could Vietnam replace fixed feed-in tariffs with standardized auctions?

As global costs for solar, wind, and battery storage systems fall, Vietnam could replace fixed feed-in tariffs (FiTs) with standardized competitive auctions to procure clean energy at the lowest cost.
