Waterproof solar tiles

Overview

What are solar tiles?

Solar tiles are roofing materials that can produce energy directly from sunlight. Solar tiles are integrated into the roof itself and function as both a roofing substance and a source of energy, as opposed to conventional solar panels, which are mounted on top of an existing roof.

Are the solar panels waterproof?

All kits come standard with the upgraded 20w solar panel for extra power! The whole system has an IP66 weather proof rating, which means that not only are the units dustproof, but highly water resistant making them perfect for outdoor rural or domestic use! Very high quality.

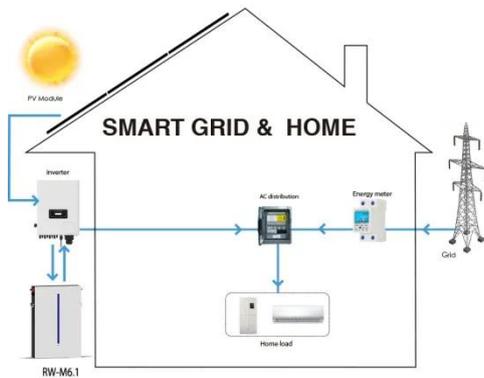

Is the Samsung Tile Pro waterproof?

The new Tile Pro also packs an official IP67 rating for water and dust resistance, which is a big improvement over the previous model's IP55 rating for splash resistance. While the classic Tile Mate sits in line with the Samsung Galaxy SmartTag2 and Apple AirTag, the Tile Pro remains in a class of its own.

Are tiles waterproof?

While tiles are waterproof, panels are completely water-resistant owing to their PVC finish or laminate coating. This also protects your walls from a build-up of condensation, which can lead to mould and fungus.
