Overview

Will China build a 5G base station next year?

Technicians from China Mobile check a 5G base station in Tongling, Anhui province. [Photo by Guo Shining/For China Daily] China aims to build over 4.5 million 5G base stations next year and give more policy as well as financial support to foster industries that can define the next decade, the country's top industry regulator said on Friday.

How will a 5G base station affect energy costs?

According to the mobile telephone network (MTN), which is a multinational mobile telecommunications company, report (Walker, 2020), the dense layer of small cell and more antennas requirements will cause energy costs to grow because of up to twice or more power consumption of a 5G base station than the power of a 4G base station.

Will the 5G mobile communication infrastructure contribute to the smart grid?

In the future, it can be envisioned that the ubiquitously deployed base stations of the 5G wireless mobile communication infrastructure will actively participate in the context of the smart grid as a new type of power demand that can be supplied by the use of distributed renewable generation.

What technologies are used in 5G networks?

Emerging mobile network and computing technologies The massive MIMO, mm-Wave, and UDN are considered promising technologies in 5G networks. These technologies may be used parallel to obtain the full benefits of directional beam-widths, large capacity, and broad coverage.
