

# What are the medium and large energy storage power stations

## Overview

---

Why are small and medium-sized pumped storage power stations important?

Small and medium-sized pumped storage power stations have unique development advantages, and the development and construction of small and medium-sized pumped storage power stations have important practical significance for optimizing the energy structure of Zhejiang Province.

Can pumped storage power stations maximize power balance of regional power grid?

The existing literature shows that pumped storage power stations can maximize the power balance of regional power grid, ensure the safe and stable operation of regional power grid, and realize the economic optimization of power grid operation through reasonable modeling and new energy distribution schemes.

What is dedicated energy storage?

Dedicated energy storage ignores the realities of both grid operation and the performance of a large, spatially diverse renewable energy source. Because power systems are balanced at the system level, no dedicated backup with energy storage is needed for any single technology.

Should pumped storage power stations be planned according to local conditions?

In 2021, the National Energy Administration made it clear in the Medium and Long Term Development Plan for Pumped Storage (2021–2035) that the construction of small and medium-sized pumped storage power stations should be planned according to local conditions in provinces with better resources.
