

# What is the size of the Darden battery cabinet

**12.8V 100Ah**

## Overview

---

What is a Darden battery energy storage system?

The Darden battery energy storage system is designed to store excess energy produced during peak production periods, and discharge it during periods of high power demand, and at times of lower solar power output, such as evening or nighttime hours.

How much money does the Darden project generate?

Beyond clean energy production, the Darden project is designed to create more than 2,000 prevailing-wage construction jobs, and generate an estimated \$169 million in economic value over its 35-year lifespan.

How long will the Darden project last?

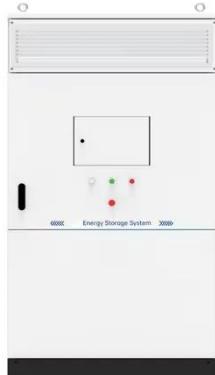

Projects seeking approval through the Opt-In Certification program must pay prevailing wages and provide community and economic benefits. The Darden project is expected to employ more than 2,000 people during the construction period, which will last from 1.5 to 3 years.

How many people will work at California's Darden project?

California added 7,000 MW of clean energy capacity to the state power grid last, and has added about 25,000 MW of capacity over the past five years. The Darden project is expected to employ more than 2,000 workers during construction over the next 18 to 36 months. San Francisco-based Intersect Power specializes in solar-plus-storage installation.
