What is the solar energy system for buildings in Namibia

Overview

Does Namibia have solar power potential?

Namibia has some of the highest solar irradiance potential of any country in Africa. We have the potential to capture around 10 hours of strong sunlight per day for 300 days per year, which is sufficient to provide power for our people and our neighbours.

Is Namibia a good country for solar?

The government recognises that Namibia is one of the best suited countries in the world for solar PV power generation and has a progressive national renewable energy policy. The key reason for this growth is that solar PV has become the cheapest source of electricity. Does Namibia have loadshedding?

.

What are the applications of solar power in Namibia?

Namibia's most common PV technology application is solar PV-based pumping, which is mainly used in cattle farms . Secondary solar applications in the country would be rural electrification, powering radios, lighting, TVs, and fans .

What are the main energy sources in Namibia?

Namibia's top energy sources are petroleum, hydropower, imported electricity, and imported coal . The country's own internal resources supply less than one-third of its needed energy requirements . Namibia has high potential for solar, wind and biomass generation .
