# Where are the 5G base stations in Dominica

## Overview

---

Which countries have extensive 5G coverage?

The countries with the most extensive 5G coverage include India, which has rapidly expanded its 5G network in the last two years, and much of Europe. Notably, India's neighbors like Pakistan, Myanmar, and even large parts of China have less 5G coverage. In Europe, good coverage extends up to Ukraine, Belarus, and into Russia.

Is 5G commercially open?

Indeed, it allows to follow the progressive deployment of 5G in the world, with always a notion of quality of associated coverage. However, it should be noted that certain areas where 5G has been detected are not necessarily commercially open. Indeed, beforehand, technical tests can be carried out by operators and their subcontractors.

How are 5G measurements done?

Regarding the collection of 5G measurements, it is done in the same way as for the previous technologies by our App users, with the difference that these users must of course be equipped with mobile and SIM card both 5G compatible. These measurements are therefore carried out in real conditions, directly in the field.
