# **Which battery to use for the inverter**

## Overview

---

What are the different types of batteries for home power inverters?

Batteries are the backbone of any residential energy storage system, providing backup power when needed. The most common battery types for home power inverters are lead-acid and lithium-ion. Understanding the benefits and limitations of each will help you make an informed decision based on your power needs. Lead-Acid Batteries.

Do inverters need batteries?

For most residential and small commercial setups, the traditional battery and power inverter combo is the preferred choice to ensure continuous power supply during blackouts. So, while some inverter types do not require batteries, if your priority is uninterrupted backup power, investing in a quality battery in inverter system is essential.

Which battery is best for a home inverter?

For inverter use, both AGM and Gel are great options if you want less maintenance. AGM batteries are often a popular choice for home inverters due to their balance of performance and cost. Source for more info on battery types: The U.S. Department of Energy provides excellent resources on battery technologies, including lead-acid variants.

What is an inverter battery?

An inverter battery is a specially designed energy storage solution that powers an inverter during electricity outages. Unlike automotive or starter batteries—which provide short bursts of high current to start engines—inverter batteries are built for deep-cycle performance, meaning they release a steady amount of energy over a longer duration.
