Which energy storage power supply in Baghdad has good quality

Overview

Does photovoltaic solar power work in Baghdad?

The state of compensation by photovoltaic electric generation systems is evaluated. The study is limited by Baghdad, the solar power of Iraq, and it is evaluated by considering a house's total needs. The total insolation time in the Baghdad city area; is 4417 hours. The solar power potential of an area is calculated at 2274 kWh/m² in Baghdad.

How much electricity does Baghdad get a day?

Prewar Baghdad had electricity 16 to 24 hours per day and was favored for distribution. The remainder of Iraq received 4-8 hours of electricity per day. After the war, Baghdad no longer has priority, and therefore both Baghdad and the country as a whole received on average 15.5 hours of electricity per day as of February 2010.

Does Iraq have a solar power potential?

In this study scope, Iraq's area and solar power potential are searched and defined theoretically. It's created a set of data about annual electricity consumption in daily detail, and electricity consumption is simulated in a photovoltaic way. The state of compensation by photovoltaic electric generation systems is evaluated.
