

# Why should UPS cabinets and battery cabinets be separated

Sample Order  
UL/KC/CB/UN38.3/UL

## Overview

---

Are ups and battery cabinets dangerous?

The UPS and/or battery cabinets might be configured to look like standard computer equipment racks. There are two primary hazards of concern: electrical and fire. Open rack batteries expose potentially lethal voltage to any person coming in contact with them.

Why do you need a battery cabinet?

This best practice is intended to protect a worker from exposure to lethal voltage or arc blast in the event of a fault inside the cabinet. Ease of use is one of the principle selling points for battery cabinets. It is convenient to service the equipment when the UPS and the battery(ies) are right next to each other.

What makes a UPS uninterruptible?

Of the three main subsystems, the battery is what makes the system “uninterruptible”. Depending upon the system design, the battery can constitute as much as 50% of the cost of the UPS. Without a reliable battery, the operation of the entire data center can be put at risk.

Why do you need a UPS battery rack?

UPS battery racks are indispensable for resilient power management. By optimizing space, enhancing safety, and supporting scalability, they form the backbone of reliable backup systems across industries. Selecting and maintaining the right rack ensures operational continuity and maximizes ROI in energy infrastructure.

## Why should UPS cabinets and battery cabinets be separated

---

### UNDERSTANDING UPS SYSTEMS AND BATTERIES

On battery cabinets, the disconnect switch should be mounted in the door to allow the battery to be disconnected from the UPS before the door is opened. This best practice is ...
