## Overview

---

- Mobile energy storage technologies are summarized.••.

What are the different types of mobile energy storage technologies?

Demand and types of mobile energy storage technologies (A) Global primary energy consumption including traditional biomass, coal, oil, gas, nuclear, hydropower, wind, solar, biofuels, and other renewables in 2021 (data from Our World in Data 2). (B) Monthly duration of average wind and solar energy in the U.K. from 2018 to 2020.

Should ASEAN deploy large-scale solar photovoltaic (PV) with battery storage?

And as solar is abundant in all AMSs, it is incumbent upon ASEAN to deploy large-scale solar photovoltaic (PV) with battery storage, which this study accordingly thoroughly analyzes, as previously mentioned.

What is ASEAN's energy supply?

ASEAN's energy supply was 616 million tonnes of oil equivalent (Mtoe) in 2017, and it is expected to grow to 2006 Mtoe by 2060 in the BAU or Baseline scenario, per Fig. 3 and Table 1. Coal, oil, and natural gas accounted for approximately 80.06% in 2017, and are forecast to reach 85.09% in 2060 in the BAU scenario. Source Authors' calculations.

What are the development directions for mobile energy storage technologies?

Development directions in mobile energy storage technologies are envisioned. Carbon neutrality calls for renewable energies, and the efficient use of renewable energies requires energy storage mediums that enable the storage of excess energy and reuse after spatiotemporal reallocation.
