# Windhoek wind and solar hybrid power generation system

## Overview

---

What is a solar and wind hybrid system?

A solar and wind hybrid system combines photovoltaic panels with wind turbines to provide continuous electricity generation. The combination of solar energy and wind energy overcomes the intermittency limitations of individual renewable sources by utilizing solar power during the daytime and wind energy during the nighttime or on cloudy days.

What is hybrid (solar+wind) energy?

Hybrid (solar+wind) energy solutions combine multiple renewable sources to create a stable and flexible energy network. Fundamentally, these systems integrate two or more renewable energy sources, such as wind turbines and solar photovoltaic (PV) panels, to offer a more resilient and sustainable alternative to traditional power generation.

What is a wind-solar hybrid system?

It's simple! Wind turbines and solar panels are the two main components of a wind-solar hybrid system. When the wind blows, wind turbines convert kinetic energy from the wind into electrical energy, while when the sun shines, solar panels generate electricity from sunlight.

What is a hybrid solar energy system?

This hybrid system can take advantage of the complementary nature of solar and wind energy: solar panels produce more electricity during sunny days when the wind might not be blowing, and wind turbines can generate electricity at night or during cloudy days when solar panels are less effective.
