# **Wireless solar container communication station Lithium Ion Battery Instructions**

## Overview

---

How do I transport a lithium battery?

Cartons or crates used to transport lithium batteries must have an approved warning label affixed. Air transportation of lithium batteries is prohibited. Do not stand below a battery when it is hoisted. Never lift the battery at the terminals or the BMS communication cables; only lift the battery at the handles.

How many batteries can a BMS system store?

The maximum number of batteries in one system is 20, which results in a maximum energy storage of 84kWh in a 12V system and up to 102kWh in a 24V and 48V system. 3. System design and BMS selection guide.

How does a battery communicate with a BMS?

The battery communicates these alarms to the BMS via its BMS cables. If the system contains multiple batteries, all battery BMS cables are connected in series (daisy chained). The first and the last BMS cable is connected to the BMS. The battery is equipped with 50 cm long BMS cables.

Do I need a storage mode for a lithium battery?

Some charging profiles offer a storage mode. This is not needed for a lithium battery, but if the charger has a storage mode then set this to the same value as the float voltage. Some chargers have a bulk voltage setting. If this is the case, set the bulk voltage to the same value as the absorption voltage.
