# Working Solar Air Conditioner

48V 100Ah

## Overview

---

How does a solar air conditioner work?

A solar air conditioner combines solar electricity and air conditioning. In simple words, it takes energy from the Sun and uses it to power your AC to cool your space! A solar panel is a device that captures the power of the Sun. It converts the Sun rays into electrical energy. This energy can then be used directly or stored in a battery.

Can AC air conditioners run with solar power?

For AC air conditioners to run with solar power, you need a device known as an inverter, converting the DC from the solar panels into AC. The inverter is an integral part of such a setup. Moreover, the solar powered air conditioner then uses up the energy stored in a battery after passing through the inverter.

What is a solar powered air conditioner?

A solar powered air conditioner is using a modern air conditioning system with renewable energy technology for a cheaper and less impactful way of cooling. Solar panels generate direct current (DC) electricity, which is converted to alternating current (AC) using an inverter—allowing your air conditioner to operate seamlessly.

Can solar energy be used in air conditioning?

One such application of this renewable energy source is in air conditioning, through solar air conditioners. These heating and cooling appliances can work by using the sun as an energy source. Reduced energy bills and minimal environmental impact are just some of the benefits which this energy source provides.
