

## EQACC SOLAR

# Yemen power supply station generator

### DISTRIBUTED PV GENERATION + ESS

## Overview

---

What is the main source of energy in Yemen?

As mentioned earlier, according to the International Energy Agency, in 2000, oil made up 98.4% of the total primary energy supply in Yemen, while in 2017, oil made up about 76% of the total primary energy supply, and natural gas about 16%. Oil and gas are the largest suppliers of fuel for power plants (Sufian 2019).

How does Yemen generate electricity?

Yemen will generate annual revenue from carbon trading and the sale of unused fossil fuels (such as oil and its by-products) and natural gas by relying on renewable energy to generate electricity. The total generating capacity of wind and solar energy is  $18600 + 34,286 = 52886$  MW (52.886GW).

How many people in Yemen have electricity?

Only 23% of Yemenis living in rural areas where the national grid system is unavailable in most villages have access to electricity; about 10-14% are connected to the national grid system, and the rest are estimated to have access from other sources, such as a diesel generator or a few solar panels.

Is there a new power plant in Yemen?

In August 2013, Yemen began construction of a new 400 MW (Ma'rib II) gas-fired power generation facility, which is scheduled to start operation at the end of 2014, but was delayed to the recent years due to the recent security turmoil (Economic Consulting Associates Limited 2009; Arab Union of Electricity 2015; U.S. 2017; Rawea and Urooj 2018).
