Zambia Uninterruptible Power Supply Import and Export

Overview

Why are Zambia's Electricity exports rising in 2023?

Exports are also highlighted in this graph, with their sharp rise from 2020 to 2023 ostensibly fuelled by the additional output from Kafue Gorge Lower and Maamba, allowing Zambia to meet growing regional demand and earn much needed hard currency. Figure 2: Zambia's Electricity Generation for Major Power Stations compared with Exports (2014 - 2023).

Is Kariba Dam a threat to Zambia's hydropower system?

While increased electricity exports have earned vital foreign currency, such gains are juxtaposed against the real threat of unsustainable water usage at Kariba Dam. The El Niño-induced drought of 2024 has underscored the vulnerabilities of Zambia's hydropower system to climate variability, leading to significant power imports and economic strain.

How does Zambia's Electricity Market work?

Zambia's electricity market is structured as a single-buyer market, with ZESCO acting as the sole off-taker and bulk retailer of electricity through the national grid.

How much electricity does Zambia produce?

Zambia has 2,800 MW of installed electricity generation capacity, of which 83 percent is from hydro, nine percent from coal, five percent from heavy fuel oil, and three percent from solar. The mining sector is the country's largest power consumer, using 51 percent of total generated electricity, followed by the domestic sector at 33 percent.
